## Insurance Branch Additional Space Requirements

## For FY-83 and FY-84

- 1. In addition to space currently occupied by the Insurance Branch, the Branch has the following space requirements for FY-83 and FY-84:
  - a. Work Stations 500 square feet.

This additional space will allow for the placement of four individuals whose work stations are in an inner corridor which is not intended for use as office space.

b. Storage Requirements - 300 square feet.

Currently the Branch has voluminous material which is stored in scattered locations throughout the branch. During a recent safety inspection we were advised that a great deal of our storage was unsafe and a potential fire hazard. This was particularly true in our file room vault. Additional storage space for unclassified material would alleviate a great deal of our storage problem.

c. Word Processing Equipment - 150 square feet.

Once word processing equipment is approved IB will have space requirements to house the base unit and printers as part of the overall word processing configuration.

| STAT | MEMORANDUM FOR: |        |          |         |        |
|------|-----------------|--------|----------|---------|--------|
|      | FROM:           |        |          |         |        |
|      |                 | Chief, | Personal | Attairs | Branch |

SUBJECT:

Space Allocation in PAB

There exits in PAB two immediate and urgent space requirements. First, this Branch has been designated to receive a trainee in the near future and it is planned that that individual will remain in the Branch for a minimum of one year. This individual will of course require space and there simply is none available that offers any minimum amount of privacy and that is not already being occupied approximately 50% of the time by a part- time employee. To satisfy this requirement we must have at least a room 9' x 8' which is 72 sq. ft. of floor space.

- 2. Second, the PSAS officer and those who visit her with very personal and sensitive needs must use a space which affords no privacy. The indivdual must in fact sit in a doorway open to the view of all who come into the Branch. This situation is further aggravated by the fact that there is only a half partition between the PSAS officer and the EAF officer which again greatly reduces any privacy effect. The PSAS office currently is 7' x 10' and should be at least 10' x 10' complete with floor to ceiling walls and a door that can be closed. The increase in floor space would be 30 sq. ft.
- 3. Of lesser urgency but nevertheless of extreme importance to the effective and smooth running of the offfice are the following space requirements:
  - a. We currently have no space for the WANG that we have been told will be placed in our office and is greatly needed. The estimated space requirement for that machine and an operator is 25 sq. ft.
  - b. We currently have three filing cabinets sitting in what is designated hall space. The presence of these files creates a significant if not a major safety and fire hazzard. They should be removed from the hall space and properly placed. Unfortunately there is currently no space available in the Branch. To satisfy this requirement 24 sq. ft. of space is needed.
  - c. We currently have boxes of materials placed under desks, in the corner, on the floor etc. These boxes are unsightly, detract from the professionalism of the office, and are a safety and health hazzard. To relieve this problem a minimum

## Approved For Release 2005/06/22 : CIA-RDP84-00688R000200130002-9

of 9 sq. ft. of floor space is required.

d. Of less importance is a need for more seating space for those who come into the Branch for exit processing. We currently have three chairs available to those individuals and that is sufficient most of the time. There are occasions, however, when those exiting the Agency come into the office all at once and during those times the seating space is not sufficient. Space for two more chairs, 6 sq. ft., would satisfy that requirement.

In summary we have an immediate and urgent need for 102 sq. ft. of floor space and a lesser but still significant requirement for 152 sq. ft. of floor space. The combined requirement is 254 sq. ft.
